INDEX.

Abel, Dr Clark, his account of the capture of a colossal orang-outang in Sumatra, 81.
Adanson, Michel, Baron Cuvier's biographical memoir of, 1.
Animal tissues fibrous, 390.
Animals, mammiferous, M. Frederick Cuvier's essay on the domestication of, 303.
Apatite in secondary trap and trachyte, 386.
——— contains fluoric and muriatic acids, 385.
Arctic expedition, overland, notice respecting the, 347.
Arnott, G. A. W. Esq. his tour to the south of France and the Pyrenees, 157, 350.
Arsenic, its taste, 183.
——— its preservative power on the bodies of persons poisoned with it, 184.
Arts, notices in the, 393.
Art, works of, discovered in the ruins of Selinus, 165.
Asiatic elephant, height of the, 388.
Audubon, John James, Esq. his account of the habits and manners of the rattlesnake, 21.
Aurora borealis, seen in the day-time, 378.
Aurora borealis, Mr Blackader's account of one seen at Edinburgh, 16th January 1827, 342.
——— ——— observed at Milnegraden and Roslin, 29th August and 9th September 1827, 379.
Auvergne, fossil mammifera lately discovered in, 383.
Ava, account of Mr Crawfurd's mission to, 359.

Baird, W. Esq. his notice respecting the habits of Lemur tardigradus, 195.
Barlow, Peter, Esq. his remarks on Captain Sabine's experiments on the dip and intensity of the magnetic needle, 142.
Barometrical observations, method of reducing them to a standard temperature, 377.
Biographical memoir of Dr Priestley, 209.
——————— of M. Adanson, 1.
——————— notice of Count de Lacepede, 270.
Birds, Mr W. Macgillivray's description of the covering of, 253.
Blackader, David, Esq. his account of an aurora borealis observed at Edinburgh, 16th January 1827, 342.
Boracic acid in mica, 386.
Botany, notices in, 192, 386.
Bottles sunk in the sea, Mr Dunlop's experiments with, 318.

Breithaupt, Professor, his account of osmelite, 271.—of a new species of pyrites, 271.—of Russian platina sand, 271.
Brocchi, Professor, notice respecting his death, 383.
Brome detected in salt springs, 183.
Brick tea, notice respecting, 388.
Bruguiere, M. notice respecting his memoir on the European mountains, 383.
Buildings, materials used by the Romans in their, 246.

Cadell, W. A. Esq. his description of the Hindoo bellows, 84.
Camelopard, notice respecting its horns, 388.
———— notice respecting a new species of, 390.
Caves containing fossil organic remains, rule to be followed in examining, 382.
Celestial phenomena from July 1. to October 1. 1827, 179.
———————— from October 1. 1827 to January 1. 1828, 373.
Changes which life has experienced on the globe, 298.
Chemistry, notices in, 183, 380.
Christie, Mr S. H. his theory of the diurnal variation of the magnetic needle, 356.
Chrome discovered in various minerals, 385.
Coal, M. Karsten's observations and experiments on the different kinds of, 60, 322.
Coal-field of Brora, account of the, 188.
Cock of the woods, account of its manners, &c. 194.
Cocoa nut, double, native of the Seychelles, 192.
Cotton of the ancients, notice regarding a memoir by M. Mongay on the, 387.
Cow-tree of the Caraccas, Mr D. Lockhart's observations regarding it, 335.
Crawfurd, Mr, account of his mission to Ava, 359.
Crimes in Prussia, 396.
Cross, luminous, in the heavens, 380.
Curved lamellar heavyspar, a new species, 386.
Cuvier, Baron, his biographical memoir of M. Adanson, 1.—of Dr Priestley, 209.
——— M. Frederick, his observations on the domestication of mammiferous animals, 303.

Daubeny, Dr Charles Henry, his tabular view of volcanic phenomena, 402.
Dichroite polarizes light, 178.
Disasters of Tivoli, 301.
Diurnal variation of the magnetic needle, Mr S. H. Christie's theory of the, 356.
Dolphin, M. F. Tiedeman's account of the brain of the common, 296.
Domestication of mammiferous animals, M. Frederick Cuvier's remarks on the, 303.
Don, Mr, his notice respecting the cow-tree and nutmeg, 336.
Dunlop, Mr James, his experiments with bottles sunk in the sea, 318.

Dutch East India possessions, notice respecting Dr Blume's intended work on the botany of the, 386.

Elephant, Asiatic, height of the, 388.
Elk, notice respecting the, 392.
Embalming, its object in Egypt to prevent contagion, 393.
European mountains, notice respecting M. Bruguiere's memoir, on the, 383.
Expedition, Overland Arctic, notice respecting the, 347.

Filtering stone of Teneriffe, notice respecting it, 384.
Fluid Telescopes, notice respecting, 394.
Fluoric and muriatic acids in apatite, 385.
Fluoric acid in felspar, 386.
Flustræ, Dr Grant's observations on the structure and nature of, 107, 337.
Food, comparative nutritious properties of different kinds of, 140.
Fossil mammifera lately discovered in Auvergne, 383.
Fossil animal remains, rule to be followed in examining caves containing, 382.
France, Mr Arnott's tour in the south of, 157, 350.
Fraser, Mr W., his account of Benefit or Friendly Societies, 122, 276.

Gases evolved from liquids submitted to galvanic action, Mr Robertson's account of an apparatus for collecting the, 44.
Geology, notices in, 188, 382.
Geology of Central France, Mr G. P. Scrope's memoir on the, notice respecting it, 402.
Gill, Thomas, Esq., his account of a mode of coating small articles of metal with tin, 140.
Glaukolite, a new mineral species, described, 385.
Gmelin, Professor C. S., his chemical examination of tourmaline, 274.
Gossamer, notice respecting, 368.
Graham, Dr, his catalogue of rare plants flowering in the Edinburgh Royal Botanic Garden, 174, 371.
Grant, Dr R. E., his observations on the structure and nature of Flustræ, 107, 337.
Green fire, method of producing, 393.

Haidinger, W. Esq., his account of Iospyre, 263.
Heat extracted from air by condensation, Mr Ivory's new law of, refuted, 149.
Hindoo Bellows, Mr Cadell's description of the, 84.
Hirudo muricata, notice respecting the, 391.
Hybrid between a stag and mare, 390.
Hydrography, notices in, 381.
Hydrosilicite, notice respecting it, 385.

Illustrations of Zoology, notice respecting Mr J. Wilson's, 199, 397.

Ilmenite of Siberia is polygmite, 187.
——— is axotomous iron glance, 386.
Innes, Mr George, his calculations of Celestial Phenomena, from July 1. to October 1. 1827, 179—from October 1. 1827 to January 1. 1828, 373.
Iron, M. Ant. Muller's observations on, 185.
Isopyre, Mr W. Haidinger's account of, 263.
——— Dr Turner's chemical examination of, 265.
Italy, view of science and literature in different parts of, 395.

Jones, Dr Thomas P., his method of polishing ivory, bone, horn, and tortoise shell, 141.

Karsten, M., his observations and experiments on coal, 60, 322.
Kirauea, Mr Stewart's account of an ascent to the crater of the great volcano of, 45.

Lacepede, Count de, biographical notice of, 267.
Latta, Dr Thomas A., his observations on the climate of Spitzbergen, 91.
Lemur tardigradus, account of its habits and characters, 195.
Life, changes which it has experienced on the globe, 298.
Lights, polar, in Siberia, 381.
Linen, fine, Dr Scott's remarks on that of the Scriptures, 71.
Lithographic drawings of the celebrated masters of different schools, notice regarding, 394.
Lockhart, Mr David, his observations on the cow-tree and nutmeg, 335.
Luminous cross in the heavens, 380.

Macgarvie, Reverend John, his thermometrical observations made at Pitt-Town in New South Wales, 234.
Macgillivray, Mr W., his description of the covering of birds, 253.
Magnetic needle, Mr Barlow's remarks relative to Captain Sabine's experiments on the dip and intensity of the, 142.
Magnetic influence of the heat produced by the solar rays, 170.
Magnetic needle, Mr Christie's theory of the diurnal variation of the, 356.
Materials employed by the Romans in their buildings, 246.
Meikle, Mr Henry, his refutation of Mr Ivory's new law of the heat extracted from air by condensation, 149.
Meteorology, notices in, 376.
Meteor, a fiery one seen at Laytonstone, 380.
Microscopic observations on animal tissues, 390.
Mineralogy, notices in, 187, 385.
Mineral waters, Dr Daubeny's circular respecting, 382.
Miller, P. Esq., his account of Symington and Bell's pretensions to be considered the original inventors of steam navigation, 87.
Mosaic printing, notice regarding, 394.
Mountains, notice respecting M. Bruguiere's memoir on those of Europe, 383.

Murchison, Mr, his account of the coalfield of Brora, 188.
Murray, John, Esq., his account of the paragrele, 103.

Nepenthes distillatoria, Dr Graham's account of, 371.
Nutritive properties of different kinds of food, 140.
Nutmeg-tree, Mr Lockhart's observations on the cultivation of the, 335.

Orang-outang, Dr Abel's account of the capture of one in Sumatra, 81.
Ornithorynchus, the alleged species of, identical, 389.
————————, notice respecting the glandular apparatus lately discovered on the abdomen of the, 389.
Osmelite, description of, 271.
Ossann, Prof., his chemical examination of Russian platina, 276.

Paragrele, Mr Murray's account of the, 103.
Patents granted in England, from 8th February to 19th May 1827, 205.—from 26th May to 15th August 1827, 405.
Patents granted in Scotland, from 21st March to 8th June 1827, 208. —from 14th June to 5th September 1827, 405.
Plants, Dr Graham's lists of rare ones flowering in the Edinburgh Botanic Garden, 174, 371.
Plants, living and fossil, Count Sternberg's observations on their distribution, 190.
Platina, Russian, Professor Ossann's examination of, 276.
Platina sand, mineralogical examination of Russian, 271.
Polar lights in Siberia, 381.
Polishing of ivory, bone, horn, and tortoise shell, Dr Jones's method of, 14.
Potato, its native country, 192.
Priestley, Dr Joseph, Baron Cuvier's biographical memoir of, 209.
Prussia, number of crimes in, 396.
Publications, new, 199, 397.
Pyrites, description of a new species of, 271.

Ramage, Mr C. T., his account of the materials employed by the Romans in their buildings, 246.
Rattle-snake, Mr Audubon's account of its manners, 21.
Reindeer, extracts from Captain Brookes' Travels in Lapland, respecting it, 30.
Rhododendron ponticum, sugar existing in its flowers in the form of grains, 387.
Robertson, Rev. Mr A., *jun.*, his account of an apparatus for collecting gases evolved from liquids by galvanic action, 44.

Scheererite, a new species of mineral described, 187.
Scot, Rev. Dr, his remarks on the fine linen of the scriptures, 71.
Scott, Mr W., his account of the temperature and climate of Shetland, 118.
Scrope, G. Poulett's memoir on the geology of central France, 402.
Selinus, works of art discovered in the ruins of, 165.
Shetland, Mr W. Scott's remarks on the temperature and climate of, 118.

Smith, Rev. Mr, his facts in regard to the hybernation of the chimney swallow, 231.
Societies, benefit or friendly, Mr W. Fraser's memoir on the history and constitution of, 122, 276.
Sound heard at a great distance, 377.
Spitzbergen, Dr Latta's observations on its glaciers and climate, 91.
Squalls of wind on the African shores, 376.
Statistics, notices in, 395.
Steam navigation, Mr Miller's remarks on Symington and Bell's pretensions to be considered the inventors of, 87.
Stewart, Rev. Charles, his account of an ascent to the crater of the volcano of Kirauea, 45.
Sugar existing in the flowers of rhododendron ponticum, 387.
Swallow, Rev. Mr C. Smith's account of the hybernation of the, 231.

Tabular view of the superior, supermedial, and medial rocks, notice respecting Henry T. De La Beche's, 401.
Tabular view of volcanic phenomena, notice respecting Dr Daubeny's, 402.
Tea, brick, account of, 388.
Teneriffe filtering stone, 384.
Telescopes, fluid, notice respecting, 394.
Thermometrical observations made in New South Wales, by the Rev. Mr Macgarvie, 234.
Tiedeman, M. T., his account of the brain of the common dolphin, 296.
Tin, Mr Gill's account of a mode of coating small articles of metal with, 140.
Tivoli, disasters of, 301.
Tornadoes of the coast of Africa, 376.
Tourmaline, Prof. C. G. Gmelin's chemical examination of, 274.
Trotting match, 194.
Turner, Dr Edward, his chemical examination of isopyre, 265.

Volcanic phenomena, Dr Daubeny's tabular view of, notice respecting it, 402.
Volcano of Kirauea, Mr Stewart's account of an ascent to the crater of the great volcano of, 45.

Walking match, 194.
Water of the Dead Sea, analyses of the, 381.
Water of the river of Sagis in Siberia, analysis of the, 381.
Waters, mineral, Dr Daubeny's circular respecting, 381.
Watt, Mark, Esq. his remarks on the magnetic influence of the heat produced by the solar rays, 170.
Wernerian Natural History Society, proceedings of the, 181.
Wilson, James, Esq. account of his illustrations of zoology, 199, 397.

Zoology, notices in, 195, 388.

P. Neill, Printer, Edinburgh.
